

NEW PRODUCT

G&K-Vijuk Pick & Pack PPM Auto-Stacker

Automate quality assurance and reduce labor cost

Replace manual collecting and packing of inserts and outserts into trays

- Modular station attaches to miniature-leaflet and outsert folding systems.
- It automatically collects a predetermined number of leaflets and transfers them into trays while simultaneously collecting another batch of leaflets.
- An optional G&K-Vijuk CM Inspection Station can precede collection. It uses cameras to inspect leaflet dimensions and fold-edge tolerances, ejecting leaflets that do not meet specifications.
- A compression device packs leaflets tightly in the tray.
- When the tray is full, it moves into the delivery area, while a new tray moves into the packing area without interrupting production.
- For further quality assurance, an optional hhs® glue-verification system is available. When used with the CM station, ejection capability is possible.
- The PPM Auto Stacker can also be adapted to other machines to handle small items such as credit or gift cards, sachets, or other small packets.

Specifications:	WIDTH	HEIGHT	LENGTH	THICKNESS
• Product: min	1 1/4"	1 1/4"	-	3/64"
	2"	1"		
max	7 7/8"	3 1/8"	-	3/8"
• Tray: min	1 1/4"	1"	11"	-
max	7 7/8"	3 1/8"	36"	-
• Production speeds up to 12,000 product/hr.
